The Fashion Institute of Technology (SUNY), New York, NY - AAS in Fashion Business Management, Cum Laude 2021–2023

Summary

Supply chain operations professional with 2+ years analyzing order flow, inventory positions, vendor performance, and demand-supply alignment across multi-vendor licensed product portfolios. Skilled in SQL, Tableau, Power BI, and Excel for operational analytics, risk identification, and planning support.

Skills

Functional— Inventory visibility, Order flow analysis, Supply risk tracking, Vendor performance analysis, PO lifecycle management, Data analysis for operational decision-making, Production & supply chain coordination, Planning support, Demand/forecasting exposure

Computer/Technical— Advanced Excel (PivotTables, XLOOKUP, SUMIFS, INDEX/MATCH, Power Query), SQL, Tableau, Power BI, Shopify, ERP systems (Exenta, RLM, PLM, AMT), Google Sheets

Core— Analytical problem-solving, cross-functional communication, prioritization

Work Experience

United Legwear & Apparel Co., NYC

08/25 – Present

Production Coordinator

- Analyze 150+ seasonal orders to monitor order status, inventory availability, shipment timing, and potential supply risks, supporting inventory planning and replenishment visibility.
- Evaluate order flow, inventory impact, and sales implications to identify risks impacting product availability and support planning decisions.
- Assess production timelines, lead times, and vendor capacity to identify supply constraints and proactively address potential disruptions.
- Develop and implement tracking tools to monitor order status, approvals, and delivery timelines, identifying and eliminating process bottlenecks to improve inventory flow and support planning decisions.
- Identify inefficiencies in trim production processes and propose transitioning from manual sticker application to printed layouts, improving efficiency and reducing labor requirements.
- Partner with vendors and third-party partners (Avery Dennison) to standardize RFID labeling and artwork processes, improving execution accuracy across seasonal production.

The Moret Group, NYC

10/24 – 07/25

Production Assistant

- Analyzed end-to-end order flow, production timelines, and delivery schedules across overseas factories to identify risks impacting shipment execution and inventory availability.
- Managed order flow, sample approvals, and milestone tracking to ensure on-time delivery and alignment with shipment timelines.
- Identified and resolved vendor discrepancies, including labeling and product data issues, preventing shipment delays and improving delivery accuracy.
- Performed WIP and cost analysis to identify production and delivery discrepancies, improving visibility into operational performance and supporting data-driven supply chain decisions.

Alexander Wang LLC, NYC

06/24 – 07/24

Production & Product Development Intern

- Supported production and product development tracking by managing POs, BOMs, and documentation within RLM and PLM systems to ensure data accuracy and workflow visibility.
- Coordinated with vendors and cross-functional teams to monitor sample progress, testing materials, and production packages, contributing to organized development timelines and execution alignment.

Project

Inventory Risk Analysis & Planning Dashboard | SQL, Tableau, Excel

- Analyzed demand, inventory, inbound timing, and replenishment gaps using SQL and Excel; identified Q4 demand surge of 1,200+ units and stockout risks in skincare and makeup to support replenishment planning.
- Built an interactive Tableau dashboard to visualize inventory risk, forecast gaps, WOS, and planning priorities by product category, improving visibility into SKU-level replenishment needs.
- Applied core inventory planning concepts, including 20% safety stock buffer and 300-unit reorder points; proposed targeted promotions to reduce excess apparel inventory and support sell-through strategy.
